GLM

A General Linear
Model of voting as
a function of all
the variables.

```
Call:
glm(formula = as.factor(Voted) ~ AGE + as.factor(SEX) + Metro +
     RaceSimp + Vet + Citizen + Labor + EduSimp, family = "binomial",
     data = trim1618)
```

Deviance Residuals:

Tree Models

1) Classification tree only uses age and education attainment

2) Variable importance measured using random forests

WE NEED TO TARGET PEOPLE WITH LOWER EDUCATION!!

- Help educate the uneducated on why it is important to vote

People with higher education levels are more likely to vote

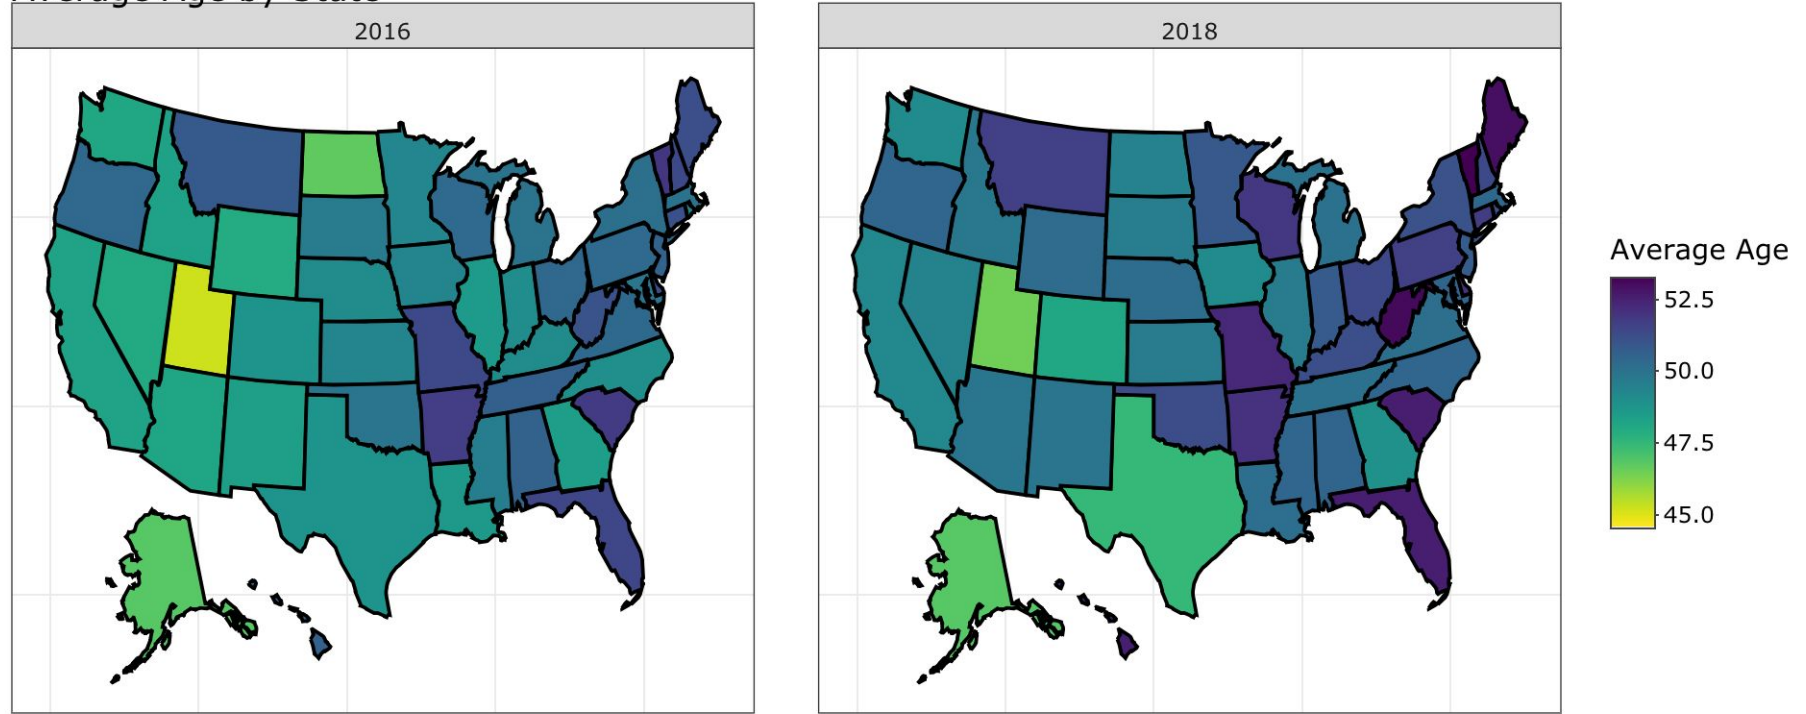

Older people are more likely to vote

We can see there is a correlation between age and voting. Older people tend to vote more, and thus we need to be encouraging the younger generations to get out and vote!

Average Age by State

Looking at the state map Utah, Colorado, Texas, and Alaska has a lower age population
